

I think it is great that XM radio provides such diverse broadcasting and that I can travel and consistently hear the same channels throughout the country without losing any of the quality. I was thrilled when they added the new traffic and weather information.

It saddens me to think that major broadcasting companies are threatened by the American people who are willing to pay for satellite radio and the fact that they are trying to stop XM Radio from broadcasting programs that the American public demands and deserves.

Since the American public is willing to pay for this service, the National Association of Broadcasters should NOT be allowed to dictate what we should hear. Please reject the NAB's petition 04-160 to block the services provided by XM Radio.
